Read This First: A Quick Guide to Using the Wartime Civil-Military Relations Dataset

This folder contains all of the information used to compile the Wartime Civil-Military Relations Dataset for our article, "Civil-Military Pathologies and Defeat in War: Tests Using New Data," published online in *The Journal of Conflict Resolution*, January 31, 2017, and available at: http://journals.sagepub.com/doi/full/10.1177/0022002716684627.

You can find a list of the questions we used to code each country-year in the PDF document labeled "Blank Coding Template."

You can find the list of country-years we coded in the Excel document labeled "CMR Observations." This document lists the observations in chronological order, grouping them by war.

The dataset with all of the codings for each observation is contained in the file "CivMilData.dta."

All of the other folders contain the coding sheets for the country-years we coded. Each war has a folder labeled with the numbers used for those observations in "CMR Observations." Within each war folder, we then have a file for each participant we coded, again labeled with the numbers used in "CMR Observations."

If you have any questions about the data or discover any errors, please don't hesitate to reach out to us so that we can provide clarifications or make corrections or updates. We want to make the data easy for others to use and hope you will let us know if you expand the coding effort.
